

Subject:

Proposal for involvement in ETN's Young Engineers Committee

The European Turbine Network is a non-profit membership association, which brings together the entire value chain of turbomachinery technology worldwide. ETN believes a common strategy and research effort between all stakeholders will enable growth and increased competitiveness of the gas turbine sector in Europe and globally.

The Board of ETN is supporting the formation of a new committee within the organisation in order to strengthen the cooperation between stakeholders of the turbomachinery value chain: the Young Engineers Committee (YEC), which would provide a platform for exchanging ideas between talented new engineers from various ETN member companies. This group will aim at providing promising engineers at the start of their career an opportunity to interact with colleagues from other companies, and with leaders and technical experts of the wider turbomachinery community with the objective to develop and support ideas and projects of common interest in the energy transition field.

Members of the inaugural group invite your organisation to nominate an engineer to join the inaugural group of YEC in order to contribute to and benefit from this initiative. This opportunity will also provide visibility to your organisation at next ETN's Annual General Meeting, during which the launch of the YEC will be publicly announced. For more details, you are invited to consult the enclosed presentation which further develops the terms of reference, as well as aims and objectives of the committee.

Sincerely,

YEC Representatives

Felix Heerbeck (Uniper)
Valentin Moëns (ETN)
Jon Runyon (Cardiff University)

YEC Advisory Team

Cath Goy (Uniper)
André Mom (ETN Emeritus)
