

Digital Solution and Diagnostics WG

Objective

Promote the development and deployment of digital solutions for gas turbines and rotating machinery operations.

Scope

Create a network, improve awareness and promote the implementation and expansion of existing Digital Solutions and technologies, and produce documents of relevance to the gas turbines and rotating machinery industry.

The added value according to our members

Discover key solutions...

New technologies

Establish the state-of -the-art digital technologies co-pilot operations and support decision-making.

Standardisation

Promote and adopt industrial standards to ensure consistency, quality, and interoperability.

Best Practices

Disseminate and discover best practices to optimise performance and minimise risks.

Benefit from...

Gain insights

from peers and experts by participating in open discussions.

Ops Data & Knowledge:

Share relevant data and expertise to drive innovation.

New Tools

Learn about and implement the latest digital tools and technologies.

exclusive advantage...

Experience with GTs

Leverage extensive experience related to gas turbines (GTs) and other key technologies.

Collaboration

Join a solutions-oriented environment that drives partnerships and collaborations.

Understanding Industry Needs

Gain a deeper understanding of current and future industry needs, shaping your strategies accordingly.
